

DPA 5 Quickstart Guide

Instructions:

1 Install RP1210 and J2534 compliant drivers from the CD. The latest drivers can always be found at <http://www.dgtech.com>

2 After rebooting, you are prompted to check for updates. Connect to the Internet and press "Continue", then "Check for Updates". If there are updates (red), press the "Download" button.

3 Connect the USB cable from the DPA to the PC. Then, connect the vehicle cable to the DPA.

4 Connect the vehicle cable to the vehicle or equipment's diagnostic port.

5 Configure your application to use the DPA. The "DPA User Manual" (Start-> All Programs -> DGTech DPA 5) contains information for configuring many of the most common applications. It also contains detailed information on troubleshooting your DPA.
